## ADDITIONAL INFORMATION

- In the open position, the sliding inner door is visible. There is a gap of 25 mm between the handle and the edge of the left door. Door brakes can be re-assembled, if required, and the door will fully open (more information in assembly scheme).

- On the top of the cabinet you can notice a metal frame, which can be fixed in two ways: with screws or pressed to magnets. The looser fixing (magnets) is done for cable management.

- There are no base holes in the cabinet for fixing the fabric panel. And this product is only suitable with cabinets.

- Combination of two cabinets must be ordered for workstation. Metal frame with legs and cabinet top are constructed to fit two-cabinets combination only. Cabinet top or shelf unit must be ordered to complete workstation combination.

- When you combine two cabinets, there is a seamless +2 mm gap between them.

- The file drawer can be used to stack items or hang files. Formats that are suitable: 309, 330.

- Between two metal beams, power unit can be placed. There is a free space of W-862, D-172, H-80 mm. While choosing the power unit, you have to consider if it will fit between the gap.

- Between the metal beam and the top of the cabinet, there is a 30 mm gap. The space is convenient for wires, all types of wires can be passed through it.

- Also, the metal frame is removable, which means that all types of plugs can be inserted through it when there is a larger gap.
